## More energy-efficient than halogen

LED lamps, very efficacious in converting power into light, may achieve over 70% of power saving as compared with traditional halogen lamps.

## Long Lifespan

The averaged lifespan of LED lamps is at least 10 times that of halogen lamps, eliminating the need for frequent replacements.

## Healthy Light

Except particular applications such as tanning booths, mosquito killers and so on, LED lamps for general lighting emit neither ultraviolet (UV) nor infrared (IR) that may harm health.

## Environment Friendly

LED lamps do not contain mercury, sodium, and other hazardous chemical elements, possibly necessary for certain traditional light sources and unfriendly to the ecological environment.

## Low Power Consumption

Under the condition of the same output light, LED lamps consume less input power than traditional
